DRAFT//PRE-DECISIONAL

More large ships enter the Mississippi and the Houston Ship Channel than any other corridor, but only about 300 reach Baton Rouge and 490 reach Houston

Distinct large ships seen at or beyond each point of each corridor, 15 rivers and ship channels, 2024 and 2025 together

Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2024 and 2025; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Distance is measured along the large-ship route cells from the entrance. Counts start 3 km in from the entrance.
