Half of Pacific and Gulf route cells lie more than 130 km offshore; 90% of Great Lakes route cells are within 49 km of shore

Share of large-ship route cells within a given distance of the Census coastline, by coast

Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2024 and 2025; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Coastline: Census TIGER/Line 2023. The analysis grid ends at 130 W and 22 N.
