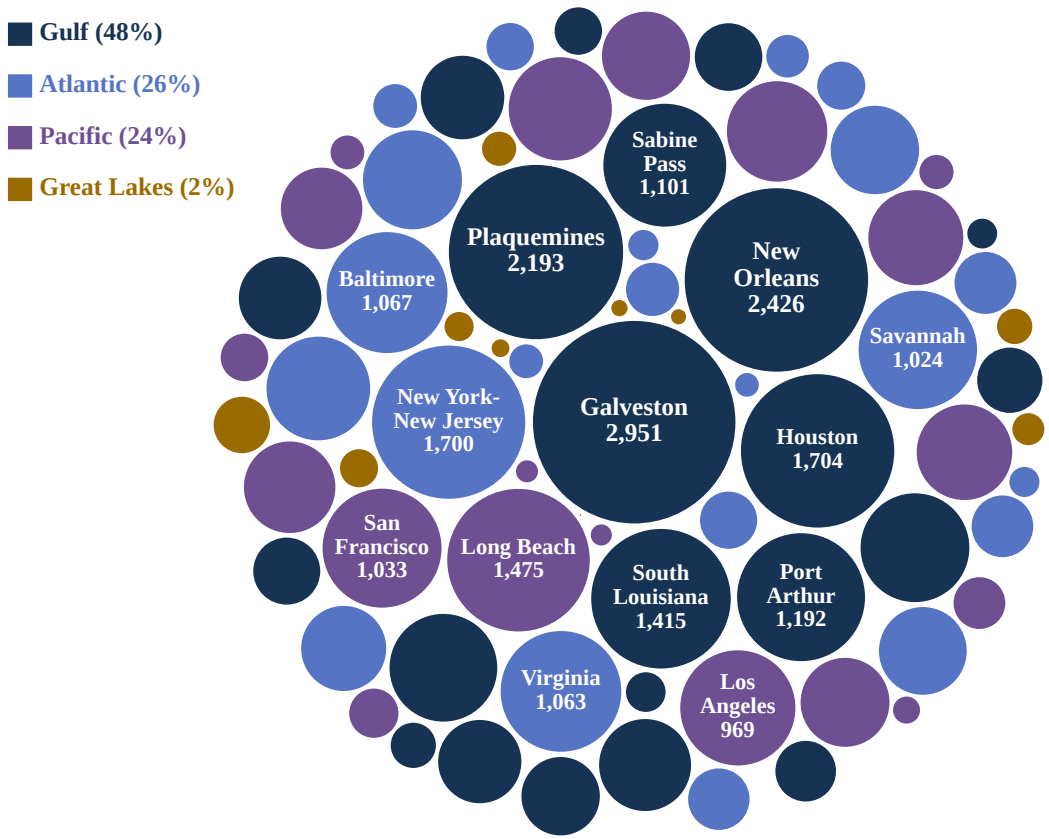
The 10 busiest deep-draft ports take 43% of large-ship port visits; the other 63 share the rest

One circle per deep-draft port, area = distinct large ships within 10 km, 2024 and 2025 together, colored by coast



Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2024 and 2025; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Port visits = distinct large ships seen within 10 km of a deep-draft port (each 1 km cell assigned to its nearest port); a ship that calls at two ports counts at both.
