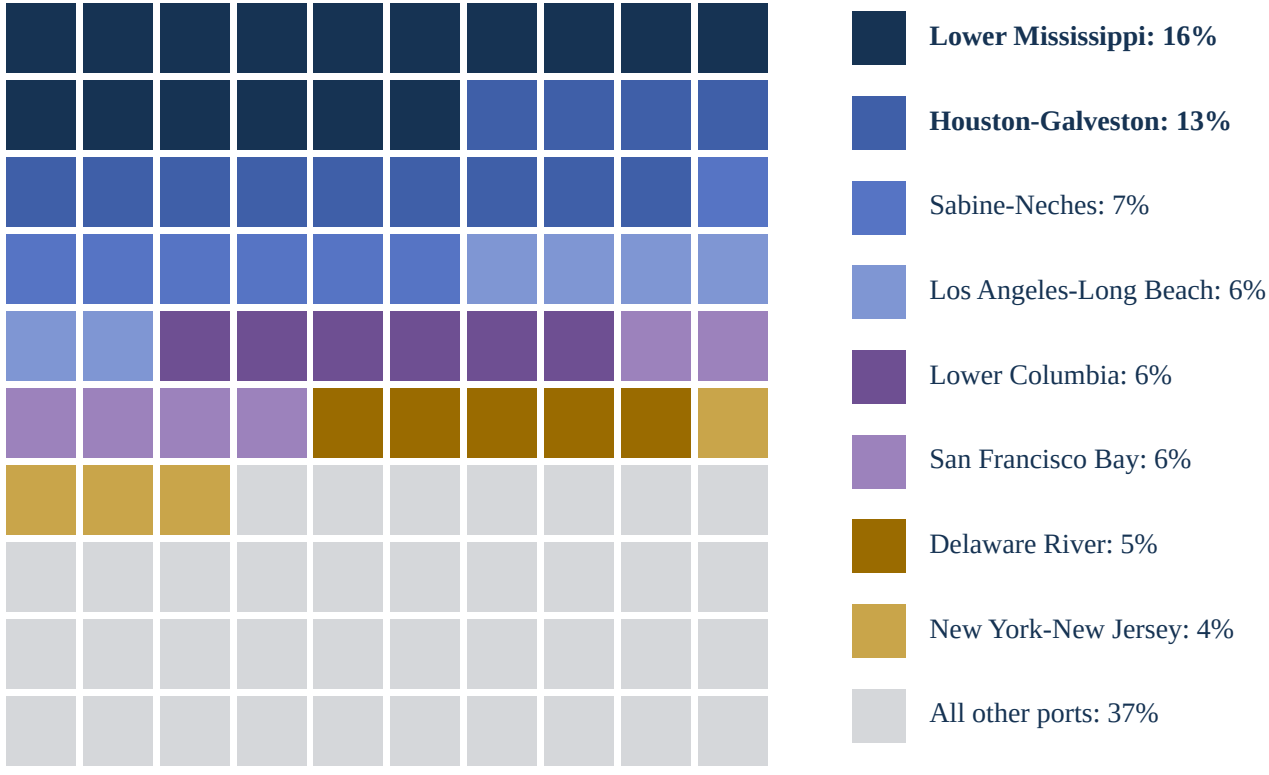
DRAFT//PRE-DECISIONAL

Eight port complexes take 63% of large-ship port visits, led by the lower Mississippi (16%) and Houston-Galveston (13%)

Each square = 1% of large-ship port visits at the 73 deep-draft ports, 2023 and 2024 together (complexes group neighboring ports)



Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2023 and 2024; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Port visits = distinct large ships seen within 10 km of a deep-draft port (each 1 km cell assigned to its nearest port); a ship that calls at two ports counts at both. Shares rounded to whole squares.
