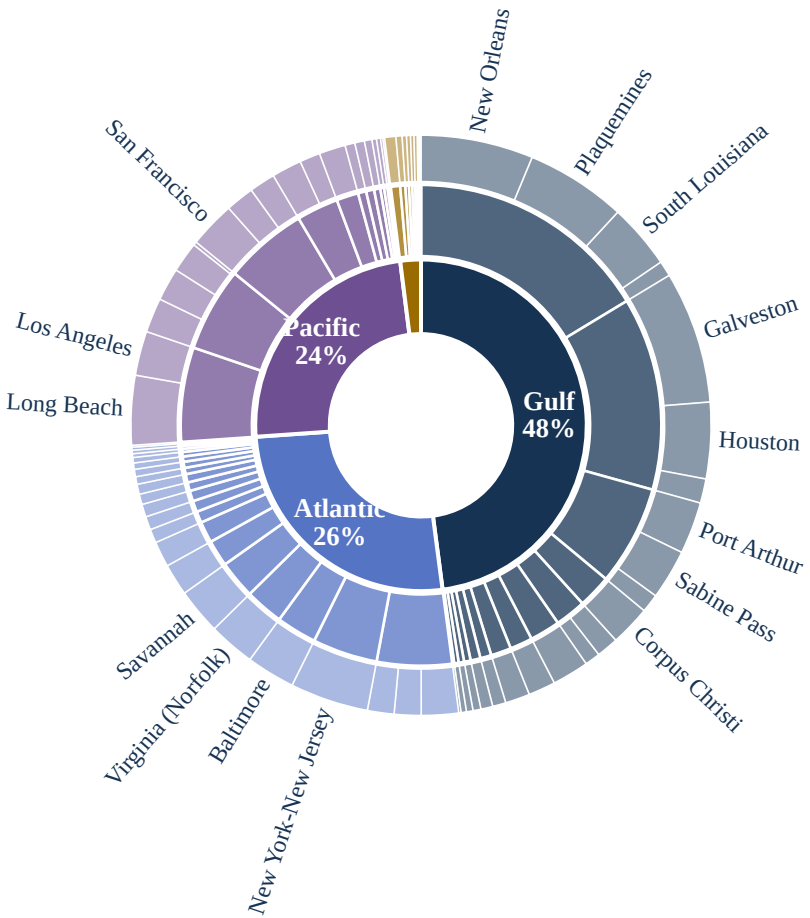
DRAFT//PRE-DECISIONAL

Nearly half of all large-ship port visits are at Gulf ports, and a third of those are on the lower Mississippi

Rings from the center: coast, port complex, port; angle = share of large-ship port visits, 2023 and 2024 together



Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2023 and 2024; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Port visits = distinct large ships seen within 10 km of a deep-draft port (each 1 km cell assigned to its nearest port); a ship that calls at two ports counts at both.
