DRAFT//PRE-DECISIONAL

On a map, the Gulf ports from Corpus Christi to the Mississippi form the largest cluster of large-ship port visits

Dorling map: one circle per deep-draft port, area = distinct large ships within 10 km, nudged apart so none overlap, 2023 and 2024 together

Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2023 and 2024; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Port visits = distinct large ships seen within 10 km of a deep-draft port (each 1 km cell assigned to its nearest port); a ship that calls at two ports counts at both.
