A 25 km zone would cover 96% of the land of Puerto Rico and the U.S. Virgin Islands, and a 50 km zone 100%

Land within each distance of large-ship water (shore mode, same method as the lower 48); the 100 km zone covers 100%

Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2024 and 2025; route cells with 4 or more large ships in a year (2 near deep-draft ports), NOAA charted lanes, and S-band racons; Census 1:500,000 outlines.
