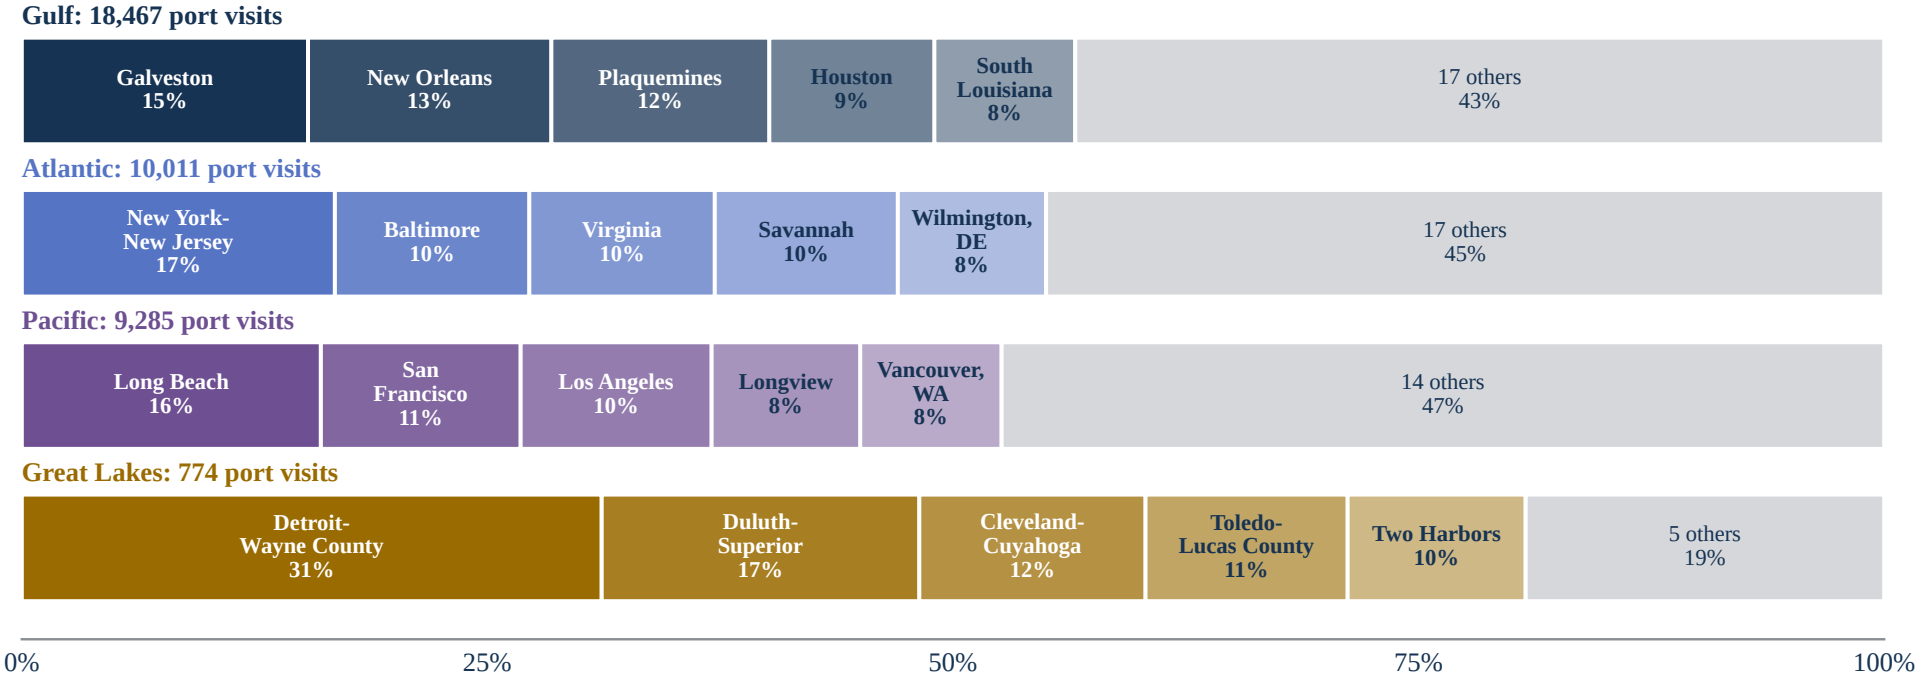
DRAFT//PRE-DECISIONAL

Galveston, New York, and Long Beach lead their coasts, but no port takes more than a sixth of any ocean coast's large-ship visits

How each coast's large-ship port visits split among its ports (top five named), 2023 and 2024 together



Source: NTIA analysis of MarineCadastre AIS, 104 sampled days in 2023 and 2024; large ships = cargo, tanker, passenger, military, and other seagoing ships 100 m or longer, plus tug-barges near the coast. Port visits = distinct large ships seen within 10 km of a deep-draft port (each 1 km cell assigned to its nearest port); a ship that calls at two ports counts at both.
